Chronic sinusitis sufferers:

It's time to get your life back.

The Balloon Sinuplasty™ approach

How does the technology work?

Step 1. Using the Balloon Sinuplasty™ system, the ENT physician gently places a Sinus Guide Catheter and a flexible Sinus Guidewire through the nostrils to access the target sinus. Next a Sinus Balloon Catheter is advanced over the Sinus Guidewire.

Step 2. The Sinus Balloon Catheter is positioned across the blocked sinus opening and gently inflated.

Step 3. The Balloon Sinuplasty™ system is removed, leaving an open sinus passage and restoring normal drainage and function.

The facts about chronic sinusitis

Chronic sinusitis is a condition characterized by inflammation of the sinuses that lasts for more than 12 weeks. It is often associated with nasal polyps, asthma, and allergies. Symptoms include a runny nose, facial pain, and a loss of smell.

Common symptoms:

- Frequent sinus infections
- Facial pain and pressure
- Runny nose
- Loss of smell
- Fatigue
