

A new option for chronic sinusitis patients

**Chronic sinusitis sufferers:**  
It's time to get your life back.

sockets that surround the nose. Chronic sinusitis sufferers do not experience normal sinus drainage and function, which keeps the sinus healthy. Symptoms include facial pain, pressure, and discomfort. The Balloon Sinuplasty™ system is a minimally invasive procedure that restores normal sinus drainage and function.

**Sinuplasty™?**  
Sinuplasty is an endoscopic, minimally invasive procedure for treating patients suffering from chronic sinusitis. The technology uses a small, flexible balloon catheter to gently dilate and open up blocked sinus passages, restoring normal sinus drainage and function. To date, the Balloon Sinuplasty™ system has improved the symptoms of chronic sinusitis sufferers and

**The Balloon Sinuplasty™ approach**

**How does the technology work?**

**Step 1.** Using the Balloon Sinuplasty™ system, the ENT physician gently places a Sinus Guide Catheter and a flexible Sinus Guidewire through the nostrils to access the target sinus. Next a Sinus Balloon Catheter is advanced over the Sinus Guidewire.

**Step 2.** The Sinus Balloon Catheter is positioned across the blocked sinus opening and gently inflated.

**Step 3.** The Balloon Sinuplasty™ system is removed, leaving an open sinus passage and restoring normal drainage and function.

**The facts about chronic sinusitis**

**Chronic sinusitis** is a long-term inflammation of the sinuses. It is characterized by a persistent nasal discharge, facial pain, and a loss of smell. The condition can significantly impact a patient's quality of life. The Balloon Sinuplasty™ system is a minimally invasive procedure that restores normal sinus drainage and function. It is a safe and effective treatment option for chronic sinusitis sufferers.

**Common symptoms:**

- Frequent sinus infections
- Facial pain or pressure
- Loss of smell
- Nasal congestion
- Thick, discolored mucus
- Headaches
- Fatigue
- Reduced quality of life
